## FINAL REPORT

EXAMINATION: CHEST (AP AND LAT)

INDICATION: \_\_\_M with adrenal insufficiency on steroids with chest pain and dyspnea // rule out infection

COMPARISON: None

FINDINGS:

AP upright and lateral views of the chest provided. Lung volumes are low. The heart appears enlarged. No definite consolidation, large effusion or pneumothorax. No overt pulmonary edema. Mediastinal contour appears normal. Bony structures are intact.

IMPRESSION:

Cardiomegaly. Limited exam due to low lung volumes. No convincing evidence for pneumonia.
